

Testimonials for the BTE PrimusRS

'The BTE PrimusRS is part of the Therapy team, and is invaluable in our daily therapy treatment.'

Senior Hand Occupational Therapist / Ergonomist

"We use it as part of our denervation assessments and it is invaluable in helping to potentially determine the outcome of surgery."

Rehabilitation Team Leader

"Without the Primus we would have no objective data regarding work output, dynamic strength and overall progress with the exercise programme. It means we can create robust and reliable reports regarding the patient."

Senior PT

"The Primus speeds up recovery times, because you can focus the patient in on specific issues and give them feedback relating to their progress. Due to the evaluation mode it can also be used to aid diagnosis and reports compiled to help Consultants plan intervention."

Senior OT

"It is wonderful to be able to offer our patients this service and we would like to say a big thank you to the people who helped raise the money for the Primus."

"The equipment is very useful and will be a great benefit to many patients in the future."

Senior OT

"The various modes of exercise gives many additional exercise options which are not available on other equipment, such as CPM and isometric. Treatment can be individually tailored to specific needs to create a comprehensive rehabilitation programme."

Senior OT

"It is valuable in the feedback it provides to the patient and therapist and it would be extremely difficult to work as effectively for our patients without this equipment."

Senior OT

Patients perspective

"I've been using the Primus since June; my fingers were virtually straight and I couldn't bend them. I had difficulty at work and felt inadequate. Using the Primus has made a big improvement; I am nearly back to doing the things I couldn't do.

"The Primus has a range of tools you can use, can be set to your ability and can be updated as you get better. It has been a big help in my recovery."

"I now look forward to my therapy because I can see my previous results on the screen and that helps to give me the incentive to do better each time...I just wish I could have a Primus at home as I would use it every day!"

"The great thing about this new piece of equipment is that it supports you so you can closely simulate the movements you do in your working life -which is so important on helping me get back to work and feeling confident again."

"The machine has made such a difference to me. I think I would not have been able to return to work and do my job as well without it."

"The Primus in the department has really helped bring the strength back to my injured hand and really gave me the confidence to return to work"

"The Primus in the Therapies department has helped me a lot. I am a joiner by trade and it helped me to get back to work i.e. Sawing action, lifting and pulling and turning handles like a screwdriver. I think I would still be off work without it and the girls that have helped me."

"I found the computer programme very encouraging and helpful as it was an individual/personalised programme, devised by staff that had carefully assessed my needs. It was very motivating to see the difficulty of the tasks increased and my scores improving. A very objective measure when you doubt your progress and improvement."
